Double Patenting

A rejection based on double patenting of the "same invention" type finds its support in the language of 35 U.S.C. 101 which states that "whoever invents or discovers any new and useful process ... may obtain a patent therefor ..." (Emphasis added). Thus, the term "same invention," in this context, means an invention drawn to identical subject matter. See *Miller v. Eagle Mfg. Co.*, 151 U.S. 186 (1894); *In re Ockert*, 245 F.2d 467, 114 USPQ 330 (CCPA 1957); and *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970).

A statutory type (35 U.S.C. 101) double patenting rejection can be overcome by canceling or amending the conflicting claims so they are no longer coextensive in scope. The filing of a terminal disclaimer cannot overcome a double patenting rejection based upon 35 U.S.C. 101.

Claims 1-31 are provisionally rejected under 35 U.S.C. 101 as claiming the same invention as that of claim 8 of copending Application No. 10/668526. This is a provisional double patenting rejection since the conflicting claims have not in fact been patented. Claim 8 of applicants' copending application No. 10/668526 is so broad that it covers all LDPC decoders that have been or ever will be invented, including that set forth in all the claims of this application.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Eroz et al. (2004/0086059) is cited to show, in step 1011 of Fig. 10 *e.g.*, the inclusion of symbol matrices in iterative LDPC decoding and Cameron et al. (2005/0246606) teaches edge message updating.
